# The dancing spider

#### The dancing spider

- 1. Learning objectives
- 2. Building block construction
- 3. Motor wiring
- 4. Programming
  - 4.1 Add expansion package
  - 4.2 Blocks used
  - 4.3 Combining blocks
- 5. Experimental phenomenon

### 1. Learning objectives

In this course, we mainly learn how to use MakeCode graphical programming to make the building block Spider "sing" and "dance".

### 2. Building block construction

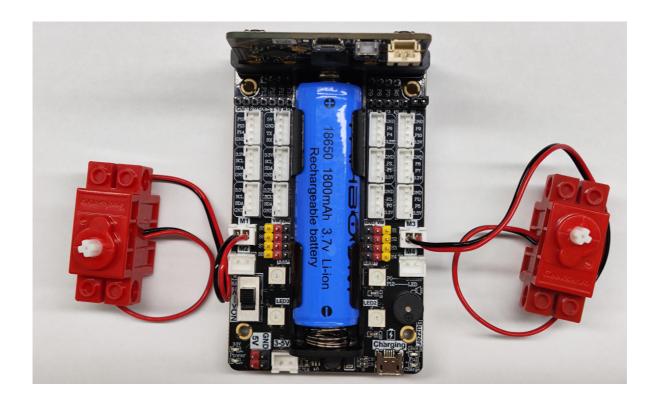

For detailed steps of building block construction, please refer to the installation drawings of **[Assembly Course]--[Spider]** in the materials or the building block installation album.

### 3. Motor wiring

The motor wiring on the left side of the car is inserted into the M1 interface of the Super:bit expansion board, and the black line is close to the battery side;

The motor wiring on the right side of the car is inserted into the M3 interface of the Super:bit expansion board, and the black line is close to the battery side;

As shown below:

## 4. Programming

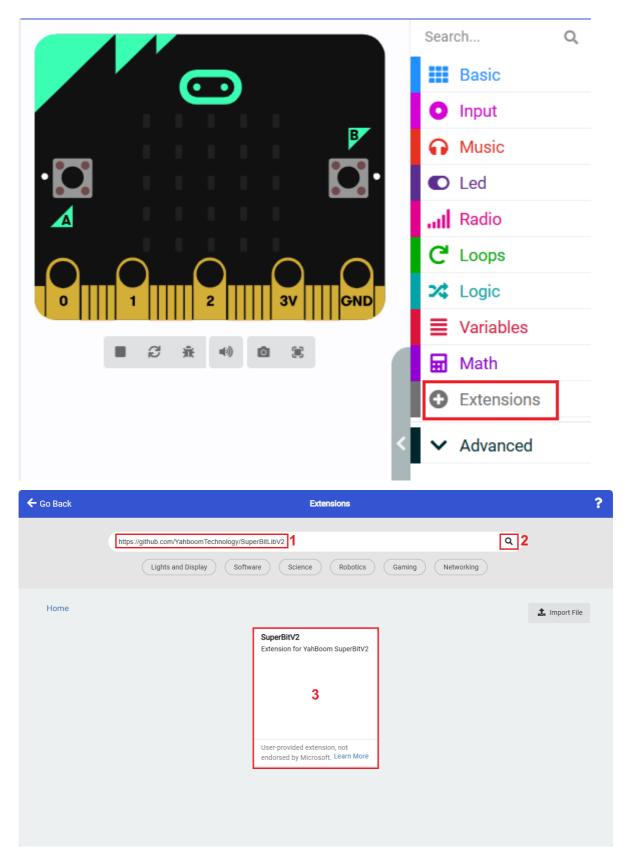

#### **Method 1 Online programming:**

First, connect micro:bit to the computer via a USB data cable, and a U disk will pop up on the computer. Click the URL in the U disk: <a href="https://makecode.microbit.org/">https://makecode.microbit.org/</a> to enter the programming interface. Then, add the Yahboom software package <a href="https://github.com/YahboomTechnology/SuperBitLibV2">https://github.com/YahboomTechnology/SuperBitLibV2</a> to start programming.

#### **Method 2 Offline programming:**

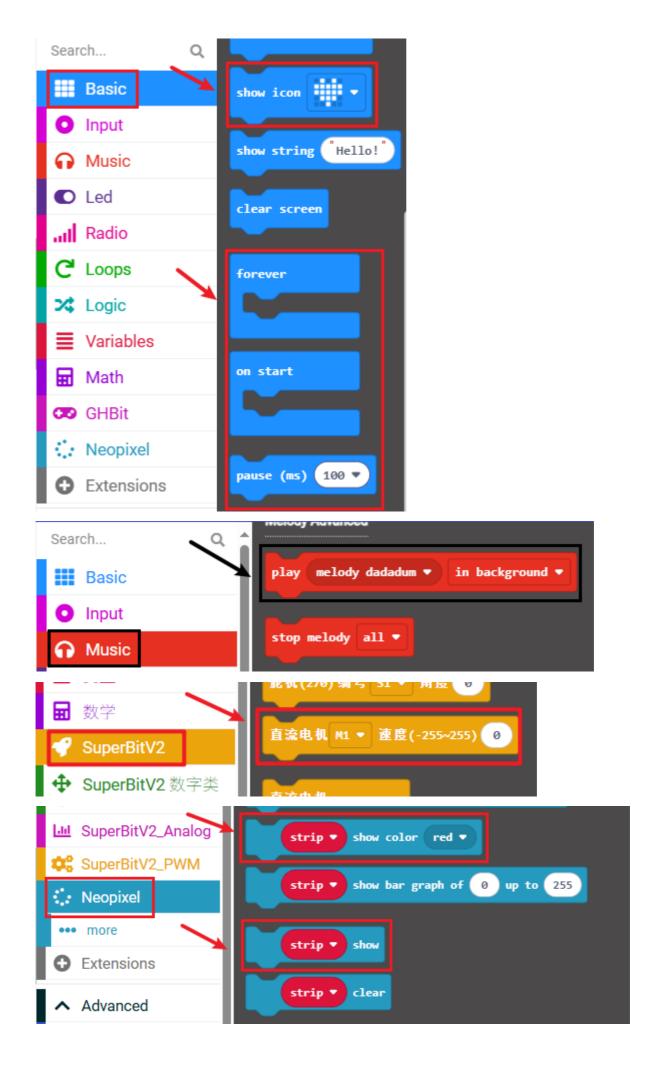

Open the offline programming software MakeCode and enter the programming interface. Click [New] and add the Yahboom software package <a href="https://github.com/YahboomTechnology/Super-BitLibV2">https://github.com/YahboomTechnology/Super-BitLibV2</a> to start programming.

### 4.1 Add expansion package

### 4.2 Blocks used

The location of the blocks required for this programming is shown in the figure below.

### 4.3 Combining blocks

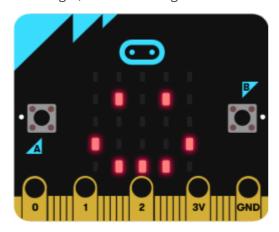

The summary program is shown in the figure below.

```
RGB_Program show color red ▼
     RGB_Program show
pause (ms) 500 ▼
     M1 ▼ speed(-255~255) 255
pause (ms) (500 ▼
     RGB_Program show color blue ▼
pause (ms) 1000 ▼
     RGB_Program show color violet ▼
 otor M1 ▼ speed(-255~255) -255
pause (ms) 1000 ▼
     RGB_Program show color red
pause (ms) 200 ▼
     RGB_Program show color green ▼
pause (ms) 200 ▼
     RGB_Program show color blue ▼
pause (ms) 500 ▼
```

You can also directly open the **microbit-dancing-spider.hex** file provided in this experiment and drag it into the browser that opens the URL, and the program diagram of this project source code will be automatically opened

## 5. Experimental phenomenon

After the program is successfully downloaded, the micro:bit dot matrix will display a smiley face, as shown in the figure below. Turn on the power switch, the building block Spider will play the music "Ode to Joy", and will move forward-->backward-->rotate left-->rotate right-->turn left-->turn right, and the RGB light will switch to different colors.

If you need to restart, press the reset button on the back of the micro:bit motherboard.
